                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2366
                                                               This invention relates to a novel methods and animal models for testing candidate drugs that can be used for the treatment or prevention of agerelated macular degeneration (AMD). Specifically, it refers to administering a candidate drugs to gene knockout mice, in particular Ccl2-deficient, Ccr2-deficient and/ or a Ccl2-deficient/Ccr2-deficient dual mouse eye for development or regression of drusen and/ or lipofuscin accumulation, as well as for the effect of a candidate drug on Bruch's membrane, retinal degeneration and/ or choroidal neovasculariation. Accordingly, such compositions exhibit ophthalmological activities and can be used for gene therapy purposee. This polynucleotide sequence is the human Ccl2 promoter region DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                          This invention relates to a novel methods and animal models for testing candidate drugs that can be used for the treatment or prevention of agerelated macular degeneration (AMD). Specifically, it refers to administering a candidate drug to gene knockout mice, in particular Collectiont, Corlectiont, Corlectiont and/ or a Colledicient/Corlection dual knockout mouse. The present invention describes analysing the knockout mouse eye for development or regression of drusen and/ or lipofuscin accumulation, as well as for the effect of a candidate drug on Bruch's membrane, retinal degeneration and/ or choroidal neovascularisation. Accordingly, such compositions exhibit ophthalmological activities and can be used for gene therapy purposes. This polymucleotide sequence is the human Coll gene and enchancer region DNA of the invention.

The sequences can be used in the diagnosis and treatment of immune system discorders, including eye diseases such as retinopathy, neovascular glaucoma an exclar degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzhafmer's disease, Alzhaflepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CTTCTATAATACTACTATTCTACATTTAAATAACAAATAAATTTAATACATTATCAAAA 1371

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal cytosine methylation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, nevescular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4494 AGGITITIAIGAIGTIAITAITATITICIAITIGAAIGAGIAAAAIGGAITITAAIGIAITAATIGIIA

comprising: (a) a sequence comprising at least 15 contiguous nucleotides comprising: (a) a sequence comprising at least 15 contiguous nucleotides of a sequence comprising variant sequences (A) from Table 4 given in the of a sequence comprising variant sequences (A). Also described: (1) an array of (PN) a comprising two or more of the isolated described: (1) an array of (PN) a nonjuigual; (3) a computer-readable storage medium, where each record has a field identifying a base storage medium, where each record has a field identifying a base signal carrying data for access by an application program having executed on a data processing system. The (PN) can be used for detecting loci associated with multiple sclerosis. ACF64025 to ACF64424 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 raciriccicciricciricciriricicaderriricaciricadadadcadaricciraa 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cancer-associated protein; CAP; cancer-associated gene; CA; gene;
                                                                                                                                                                                                                                                                    New isolated cancer associated nucleic acids comprising at least 10 contiguous nucleotides, useful for diagnosing, preventing and/or treating cancers such as leukemia and lymphoma.
                                                                                                                                                                                                                                                                                                                                              The present invention relates to cancer associated sequences (ADO97025-9098000). The sequences are useful for the diagnosis, prevention and/or treatment of cancer, such as leukemia and lymphoma. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formate directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    60 AGGGAGCCGGCCAAAGGTTGAGAGCTCCTTCGTGGGAGGCCCCTTGGAATGTGGGCC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             67002 AadsAktrerteternAderrtagertenenengektigaerraggganggangerageee

The present invention describes a composition (I) comprising: carriers and immunostimulants; and a polypeptide (II) of a ovarian tumour copypeptide encoded by a polyputcleotide (III) having a cDNA sequence (S1) from the 10912 nucleotide sequences as given in ABL77023 to ABL87934, cfrom the 10912 nucleotide sequences as given in ABL77023 to ABL87934, cor antigen presenting calls that express (II). (I) has cytostatic cativity. An oligonucleotide (IV) that hybridises to (S1) can be used for activity. An oligonucleotide (IV) that hybridises to (S1) can be used for cativity. An oligonucleotide (IV), detecting to (S1) can be biological semple from a patient with (IV), detecting to predetermined cutoff of serum or ovarian tissue. The method comprises contacting a biological sample from a patient with (IV), detecting to a predetermined cutoff or shybridising to (IV) and comparing the amount to a predetermined cutoff or alone and thereby detecting ovarian cancer in the patient, where the computating and/or expanding T cells specific for an ovarian cutoff in design and preparation of ribozyme molecules for inhibiting cuseful in design and preparation of ribozyme molecules for inhibiting contacting the correcting T cells with (III) or (III) is useful in design and preparation of ribozyme molecules for inhibiting contacting the representation of the tumour polypeptides and proceins in tumour cells; and the process of the tumour polypeptides and proceins in tumour cells; and the contacting the representation of the contacting from a suitable library e.g., a tumour connection of the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the contacting the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       associated (CA) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer drug candidate and monitoring the effect of the anticancer drug candidate and monitoring the effect of the anticancer drug candidate and monitoring the CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample activity of a CAP protein. The CAP nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a civity of a CAP protein. The CAP nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a civity of a CAP protein. The CAP nucleic acid is a cancer, involving determining the expression of a CA nucleic acid in a cissue. This sequence represents a marrine CA gene of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   106445 AGGAGCTTGCTCGCATGGTTGTGAAGGAAGCCAGGTGTGTCCCAGGCCTGCTTCGAGGC 106386

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                22-AUG-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-SEP-2000;
                                                    09-AUG-2001
The invention relates to isolated polymucleotide (I) and polypeptide (II) squences. (I) is useful as hybridiation probes, polymerase chain caequences. (I) is useful as hybridiation probes, polymerase chain.

CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymicleotides are also used in displancation as expressed sequence tags for identifying expressed contains. (I) is useful in gene therapy techniques to restore normal cuseful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food colypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in polypeptide and polymucleotide sequences have applications in polypeptide and polymucleotide sequences have applications of mutations diagnosible for genetic disorders or other traits to assess biodiversity responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and conding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in certronic format directly from WIPO at the conding activity of the conding activity from WIPO at the conding activity from WIPO at the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding activity of the conding ac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1302 échcgiachiatrchgchagcchagccgrccccchahachgracharachitrchcdch 1361

antion acid sequences given in AAMS1921. (I) have cytostatic antion acid sequences given in AAMS1921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) to proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) collynucleotides may be used to produce the secreted (I), by inserting the polynucleotides may be used to produce the secreted (I), by inserting the colline acids into a host cell and culturing the cell to express the concers and cancer immune/haematopoietic-related diseases, especially concern metastases of haematopoietic-derived cells. AAK64703 concers and cancer metastases of haematopoietic antigen genomic concerns from the present invention. AAK54942 to AAK87694 captesent invention. AAK54942 to AAK87695 and AAM82169 crepresent sequences from the exemplification of the present invention
                                                                                                  human immune/hematopoletic antigen polypeptides, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      83

(GEMY ) GENETICS INST INC.

The invention relates to 592 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted a variety of human tissue sources and which encode novel secreted cavariety of human tissues can be used as probes for the identification and isolation of full length cDNA and genomic DNA. The identification and isolation of full length cDNA and genomic DNA. The comparing are useful in the treatment of various immune deficiencies of polynucleotides and proteins can also be used as mutritional supplements. The proteins are useful in the treatment of various immune deficiencies and disorders such as viral infections. Datertial infections, fungal confections, autoimmune disorders (e.g. rheumatoid arthritis, multiple colections, autoimmune thyroiditis and diabetes) and allergic reactions sclerosis, autoimmune thyroiditis and diabetes parkinson's concustodegemerative diseases (e.g. Alzheimer's disease, Parkinson's disease), liver fibrosis (e.g. Crohn's disease) and tumours. They are also inflammatory disorders (e.g. Crohn's disease) and tumours. They are also useful for regulating burns, incisions and ulcers. The proteins are also useful for regulating companion in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating companions and ulcers. The proteins also useful for regulating companions and ulcers. The proteins are also useful for regulating companions and ulcers. The proteins also useful for regulating companions and ulcers. The proteins also useful for regulating myeloid cell deficiencies. Five hundred and ninety two polynucleotides derived from a variety of human tissue sources which encode secreted proteins, useful for treating immune deficiencies and disorders such as autoimmune disorders. Resnick RJ; Sequence 673 BP; 117 A; 226 C; 168 G; 162 T; 0 U; 0 Other; Howes SH, Agostino MJ, Claim 1; Page 365; 372pp; English. Wong GG, Clark HF, Fechtel K, Gulukota K, Graham JR; WPI; 2002-179321/23

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end repaired with 74 DNA polymerase and 74 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoreais. Vector DNA was prepared from a derivative of pWD42 (gij |473214 |qb| hlar129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AZ536871 481 bp DNA linear GSS 06-NOV-2000 Gm_ISb001_082_J15_R ISU Soybean BAC Library (pBeloBAC11 HindIII) Glycine max genomic clone Gm_ISb001_082_J15, genomic survey

polylinker; Site_1: Not I; Site_2: Eco RI; Plasmid DNA
from the normalized library NCI CGAP GC4 was prepared, and
secircles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from a pool
of 5,000 clones made from the same library (clonelDs
1257096-1258631, l469064-1470983, and 1475592-1476743).
Subtraction by Bento Soares and M. Fatima Bonaldo. "

/note="Vector: pBeloBAC11; The ISU BAC library (Marek and Shoemaker, Genome 40:420, 1997) was constructed using the HindIII site in pBeloBAC11. The library consists of HindIII site in pBeloBAC11. The library consists of approximately 40,000 clones with an average insert size of sproximately 40,000 clones with an average insert size of clone by pCR amplification of DNA pools.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AI280614 165 bp mRNA linear BST 21-DEC-1998 qu03h06.x1 NCI CGAP_Ov23 Homo sapiens cDNA clone IMAGE:1963739 3' similar to contains PTRS.b3 PTRS repetitive element ;, mRNA

Clones are derived from the INRA bovine BAC library
(http://locus.jouy.inra.fr/fpc/cattle_bac_map.htm). For BAC library
availability, please contact Andre Eggen (eggen@jouy.inra.fr). This
work was undertaken as part of the International Bovine BAC
Mapping Consortium (IBBMC) by INRA (Jouy-en-Josas) and Genoscope
(Evry) plate: 95 row: A column: 11
Seg primer: M13 Reverse
Class: BAC ends.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /clone_lib="INRA bovine BAC"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOTE: This record contains 76 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Contact: sequence submissions@genome.wi.mit.edu Project Information Center project name: L5499

NOTE: This is a 'working draft' sequence. It currently consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                   Submitted (29-JAN-2000) Human Genome Sequencing Center, Department of Molecular and Human Genetice, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Oct 14, 2001 this sequence version replaced gi:11079355.
